CUTTING EDGE SOLUTIONS FOR THE RETAIL ENVIRONMENT

SAFE, CONVENIENT AND REWARDING ACCESS SOLUTIONS

Retailers are in a continual competition to provide customers with a shopping experience that is convenient, safe and rewarding. But their locations must also be secure, with effective ways to deter would-be thieves from taking advantage of the open doors and warm welcome.

AUTOMATIC GATES

OVERGATE RANGE

The OverGate range are robust, bi-directional motorised entrance gates with detection and counter options. Automatic gates allow authorised entrance, detect frauds and attempt exits of shoplifters by activating alarms and closing arms.

FEATURES

- Motorized bi-directional
- IP rating 21
- Complies with CE marking
- Torque limiter joint
- 80W rated absorption

ANTI-PANIC MECHANISM

If the arm is powered and closed, it can be forced into opening with a push. The alarm signal is immediately activated and the arm automatically returns to closed position.

IMPACT

In the event of accidental impact with people or things, a high locking torque will immediately stop the motor.

POWER FAILURE

In the event of a power failure, the arm is free to move. When power returns, if the arm has been moved from its closed position, it will automatically return to closed position.

OVERGATE WITH TUBULAR ARM
Robust, single arm motorised swing gate

OVERGATE WITH RADAR
Motorised swing gate with sensors for opening detection

OVERGATE WITH PHOTOCELLS
Motorised swing gate with detection sensors and visual LED cues

OVERGATE PANEL
Fast and safe swing gate equipped with detection algorithms

MECHANICAL GATES

MECHANICAL GATES RANGE

Mechanical Gates are an economical alternative to automatic gates designed for access control and customer guidance in retail outlets.

It is also a valuable and cost-effective entrance solution used for disabled and trolley access, or it exists in security installations alongside tripod turnstiles or other products.

The Mechanical Gate is equipped with an anti-panic device: pushing over a sufficient force the swing gate disengages to create a free exit in both directions.

FEATURES

- Push mechanism
- Arm closing speed adjustment
- IP rating 31

ANTI-PANIC MECHANISM

A fully mechanical anti-panic mechanism allows for arm opening in the reverse direction of that pre-set for transit with pushing action.

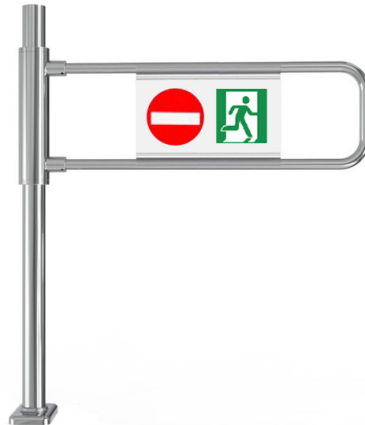

OPENING DIRECTIONS

Both the floor-mounted and wall-mounted mechanisms can be supplied with opening direction:

- Right
- Left
- Bi-Directional

MECHANICAL GATE
Robust, single arm mechanical swing gate

EMERGENCY EXIT GATE
Robust, single arm mechanical emergency exit swing gate

CHECKOUT EXIT GATE
Robust, single arm mechanical swing gate, acting as a theft deterrent

4 ARMS TURNSTILES

TURNOGATE

Economical and efficient, four arm horizontal turnstiles offer an affordable option of theft reduction, access control and incorporates aesthetic requirements.

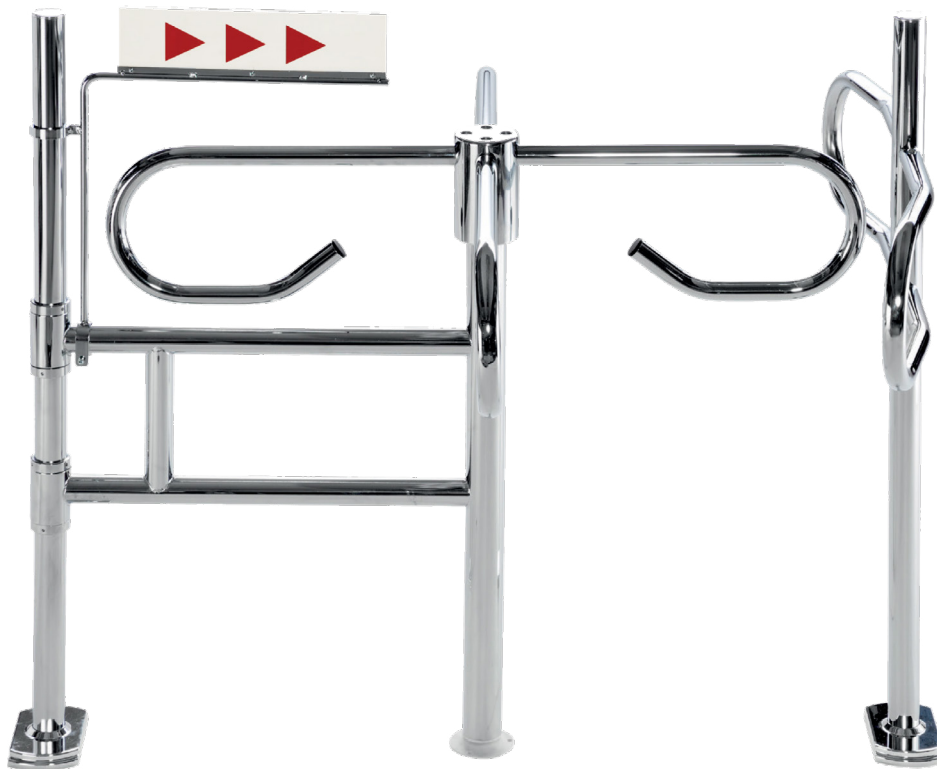

The turnstiles are equipped with an anti-panic device that, when pushed, allows the reversal of the motor's arm rotation.

ANTI-PANIC MECHANISM

If the turnstile is closed, it remains closed and can be opened only manually via the anti-panic mechanism forcibly unhooking the turnstile itself from the fixing support on the floor, without lifting the turnstile, and allowing it to rotate in the exit.

FEATURES

- Bi-Directional passage
- Manual push mechanism
- IP rating 31

ANTI-PANIC MECHANISM

Equipped with a double safety system, effortlessly control reverse rotation and ensure emergency transit for both people and objects. Elevate safety measures with our innovative device, seamlessly releasing the cart passageway for optimised control and utmost security.

ABOUT US

COMINFO

We are an European manufacturer of speed gates, turnstiles, and data collection systems with over 30 years of experience. Since 2019, we have been part of the Gunnebo group, the world's leading entrance control and safe storage company.

We do everything to make your employees or company guests feel safe and welcome. Our brand offers a wide range of products, solutions, and services for secure and smart access to corporate offices, retail, airports, government institutions, and manufacturing plants, to name a few.

With COMINFO products, you can control nearly all entrances. Simply and efficiently.
